Numerator 2020 HOLIDAY PLANNING

CONSUMER INTENTIONS SURVEY

As the holiday season draws near, there's little doubt that upcoming events are going to look different than they have in years past. To help brands and retailers better inform their end-of-year strategies, we've surveyed over 2,000 past holiday shoppers to understand how they expect to celebrate— and shop for— the remaining holidays of 2020.

Christmas/Hanukkah

Brands and retailers should prepare to cater to smaller, more intimate gatherings. Travel will be limited, so consumers will be looking for ways to celebrate at home, and they'll also be looking for creative ways to stay connected with friends & family from a distance.

anticipate celebrating

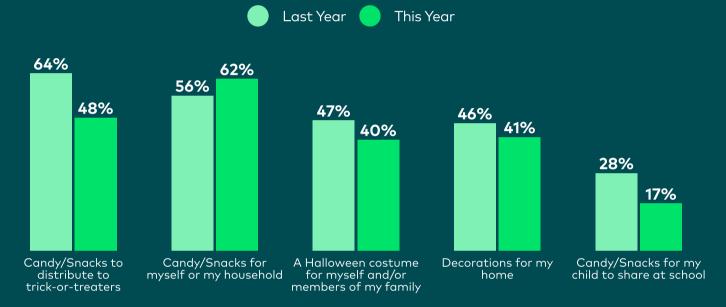

differently this year

CELEBRATING: HALLOWEEN

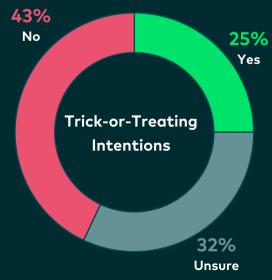

Given the public & communal nature of most Halloween celebrations, it's no surprise that this is the holiday most likely to be celebrated differently this year.

The number of households planning to purchase Halloween candy & snacks to distribute to **trick-or-treaters** or at their children's school are down significantly this year versus last. At the same time, those intending to purchase for **household consumption** are up slightly, likely to compensate for missed trick-or-treating opportunities.

Candy Buying Intentions

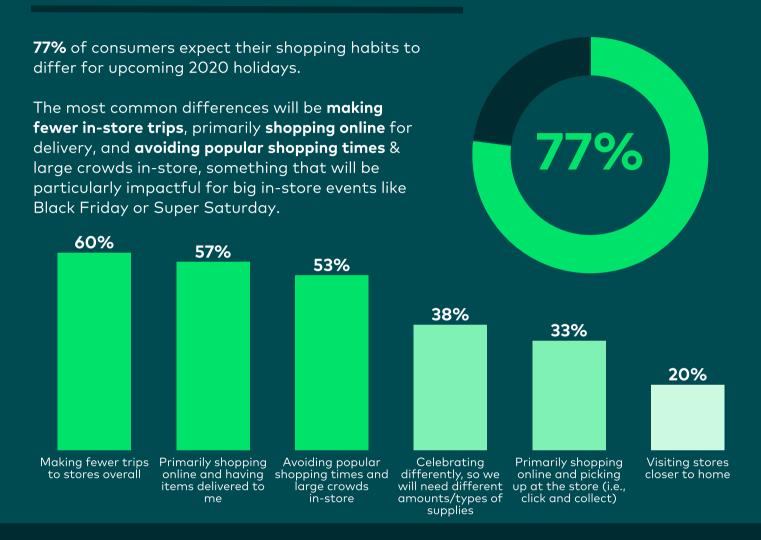

While the increase in candy purchases for household consumption may offset declines in other areas, as a whole, candy sales are expected to be down this year. **52%** of shoppers plan to buy less candy this Halloween than they did last, driven in large part by an expected lack of trick-or-treating.

When asked if anyone in their household participated in trick-or-treating last year, **66%** said yes; this year, only **25%** plan to, with another **32%** unsure. The number planning not to participate was up from **34%** last year to **43%** this year.

SHOPPING

When, how & what consumers buy for upcoming holidays will vary drastically from years past, with some choosing not to shop at all.

Halloween & Labor Day stand to be hit the hardest, each down 11% in number of consumers planning to shop. Christmas & Hanukkah will see less impact.

Brands and retailers can expect smaller crowds instore this year and should prepare for heavy online sales. While some holidays will see fewer shoppers overall, others like Christmas & Thanksgiving will simply look different.

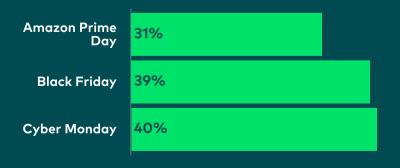

SHOPPING: HOLIDAY GIFTS

While the majority of consumers still plan to celebrate and shop for Christmas & Hanukkah, there are big changes coming for the biggest shopping period of the year.

More than half (54%) of consumers plan to do all or most of their holiday shopping online this year, more than double last year's 22%. These intentions are evident in the specific retailers at which individuals plan to buy gifts; intentions to shop at Target and Walmart stores, for example, were down, while their respective websites were up.

Similar numbers of shoppers plan to purchase gifts on Black Friday and Cyber Monday. Nearly **1 in 3** also plan to buy them on Amazon Prime Day. For those planning to shop on Black Friday, only **34%** intend to go instore, while **90%** plan to participate online.

SPENDING

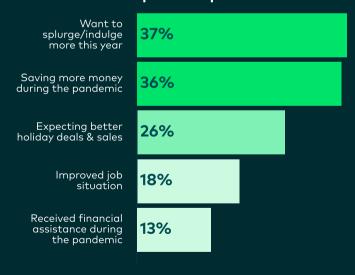

If consumers decide to shop at all, their spending will likely be lower this year than it has been previously.

For all upcoming holidays, at least **1 in 3** consumers intend to **spend less** than they did the previous year; for Labor Day and Halloween, this was closer to **1 in 2**. There were a small number of consumers expecting to **spend more**— Christmas & Hanukkah were the most <u>likely holidays to see a spending boost among select consumers</u>.

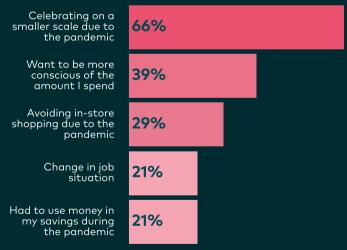

The most likely reasons given for spending more on given holidays were the desire to **splurge or indulge**, and because money had been **saved during the pandemic** due to fewer activities being available. Those spending less will primarily be driven by **smaller scale** celebrations that require fewer supplies, and also simply being **budget-conscious**.

Of those who expect to spend less...

Despite some consumers with pent-up buying power, overall holiday spending will be down across the board this year. Brands & retailers will need to reimagine holiday celebrations and sell that vision to consumers order to capture levels of spend closer to years past.
